
Truth
95% range of 50 independent fits (a)
Fit of one genome (a)
True sampling SD and its 95% interval (b, c)
Bootstrap, 50 Mb blocks (6 per genome); window coverage of the true Ne 37% (31–43%), projected truth 44% (38–51%), fits' mean 83%
Bootstrap, 5 Mb blocks (60 per genome); window coverage of the true Ne 43% (38–48%), projected truth 50% (46–55%), fits' mean 92%
Share of the 10 genomes whose band covers the true Ne (d) or the projected truth (e)
Share whose band covers the fits' mean (d)
Clopper-Pearson 95% interval of the thick 50 Mb line (d, e)
Nominal 95% (d, e)
Interquartile range over the genomes (c)
The genome's bootstrap 95% band, its edges (a)
a
Effective population size, Ne
genome 1
Years ago
b
SD of log10 Ne
Years ago
c
Bootstrap SD / true SD
3.4
2.3
Years ago
d
Coverage, true Ne
Years ago
e
Coverage, projected truth
Years ago
