
VCF + mask, callable bases per bin (psmc-rs default)
VCF + mask, every called bin full (= consensus → fq2psmcfa)
multihetsep (uncalled sites placed)
VCF without its mask
Truth
Complete-data fit (d-f)
a
θ, change from the complete data (%)
b
RMSE of log10 Ne vs the truth
c
RMSE of log10 Ne vs complete data
none
10%
30%
clustered
dispersed
Uncallable positions in the mask
d
Effective population size, Ne
dispersed 30%, replicate 1
Years ago
e
Bias, mean log10(Ne / true Ne)
clustered 30%, mean of 5 replicates
f
dispersed 30%, mean of 5 replicates
